PERSONAL PROJECTS

Movie App (09/2022 - 10/2022)

- This project is a movie application that allows users to view information about movies which include ratings and reviews for each movie. The application was built using React JS , Node JS , Express JS , Mongo DB , and Post man API
- The Front-End --- React JS will provide a user - friendly interface for users to interact with the application . It will allow users to view detailed information about each movies
- The Back-End--Node JS will provide an API to connect the front - end to the databases .With use of Express JS to route the requests and manage the data . Mongo DB will be used to store and manipulate the data . Post man API will be used to test the end points and ensure they are working as expected

Admin DashBoard (11/2022 - 12/2022)

- This project will involve creating a dashboard for an administrator to manage products and users . The dashboard will have the ability to create , edit , and delete products and users . It will also allow for the administrator to search for products and users .
- The project was built using React JS and Boot strap for the front - end development

Pizza App in development (12/2022 - /2023)

- This project is a pizza ordering application , which allows users to order pizz as online . It will be built using React JS , Node . Js , Mongo DB , Express Js , and Post Man API
- The project will have a login and sign up page , where users can create their account and login
- The backend of the application will be built using Node . js and Express . js It will also contain the code for connecting to the database and performing CR UD operations . The project will also use Post Man API to test the API end points .
